In order to facilitate a discussion around the selection of initial zoning categories for the conditional permitting of medical marijuana dispensaries and collectives, Planning conducted a GIS mapping exercise. This analysis graphically portrays the three zoning classifications (LC, GC and M-1) along with a 300-foot setback from residential and agricultural residential zoned properties and a 1,000 foot buffer from the list of sensitive uses. However, it is crucial to explain that there are significant caveats associated with this analysis. Not all information is available in the GIS system and information may not be entirely up-to-date. Therefore, any actual application within one of the specified zones must be accompanied by its own site specific information as to whether the site meets the various parameters of the ordinance.
